

jQuery graphic effect - hover and fading opacity

```
$(function() {
$(".imghover").hover(
function() {
$(this).fadeTo("fast", 0.7);
},
function() {
$(this).fadeTo("fast", 1.0);
});
});
```

Except the effect in previous example to zoom in and out on hovering the graphics, I have added an opacity level changed on each. Only need to add a class name `imghover` and add the script below.

Function: `fadeTo(speed, opacity, callback)` - Fades the opacity of all matched elements to a specified opacity and fires an optional call back after completion.

```
$(function() {
$(".imghover").hover(
function() {
$(this).fadeTo("fast", 0.7);
},
function() {
$(this).fadeTo("fast", 1.0);
});
});
```
