

Dynamic Web Pages: ASPX 2.0

Intranet example: send tracking data to UPS site
Dynamic Web Pages: ASP.NET 2.0 Data Access + MS Access UPS database

Connecting with company's intranet UPS database, to get a summary report. The report is filtered by year, date and customers. Viewers could click on one of the record to read detail data including UPS tracking numbers. Plus the tracking numbers could be transferred out to UPS official site to get the shipping status list. (Due to privacy protection purpose, the customers' names are faded out.)

UPS Database Web / Query string On-line UPS Tracking Status

set the button link to UPS and set "query strings":
